PÁRAMO CCG

THE COLLECTIBLE CARD GAME

MYTHOLOGY

INDEX

1. INTRODUCTION
2. HISTORY OF PÁRAMO
3. SETTING
4. CLANS

1. INTRODUCTION

Páramo is a collectible card game or **CCG**, a tactical experience where players take on the role of clan leaders in conflict over the control of a devastated world and its scarce resources. This compendium serves as the definitive guide to understanding the rich history, the disputing factions, and the background of the Páramo universe.

In **Páramo CCG**, each player builds a deck of **50 cards** and chooses **one boss** with unique characteristics to command their troops. The fundamental goal of the battle is to use tactics to reduce the opponent's life points **to zero** before they finish you off.

The initial collection of cards introduces each of the 5 factions, called **clans**. Additionally, there are **neutral** cards representing mercenaries, mutants, and remnants of technology usable by any clan to cover weaknesses or reinforce strategies.

Páramo stands out for its dynamic mechanics and particular tactics:

- **Fluid resource management:** Resources increase every turn by default, to maintain the logic of a real confrontation where threats grow in size as the conflict progresses.
- **Card diversity:** On the battlefield, you can deploy a wide variety of troops and other gadgets, as well as other effects that you will play directly from your hand.

This compendium is your gateway to the wasteland: an essential tool to master the rules, thoroughly know the background of the survivors, and build the definitive deck that will allow you to rule the ruins of Vergel.

2. HISTORY OF PÁRAMO

The world of Vergel was a peaceful place, much like ours. It possessed a single landmass, completely surrounded by water, filled with cities, cars, and technology that today we would consider everyday. But peace never lasts forever.

One day, without warning, the sky broke. The Breach opened and, suddenly, the planet was flooded with fangs, claws, and monsters straight out of the worst interdimensional nightmares.

Faced with the savage invasion of supernatural creatures, the leaders of Vergel made a catastrophic decision in a desperate attempt to stop the chaos: they pressed the red button and unleashed a global nuclear war. The bombs fell and the fire devoured everything. However, it was not enough to stop the beings emerging from The Breach. The metropolises collapsed, the waters dried up, and the fertile Vergel was reduced to a hellish wasteland of scrap metal, radiation, and blood, known ever since simply as Páramo.

Today, survival depends on the law of the strongest and the side you choose in the wasteland. Five clans (three of them human and two invaders) clash relentlessly for water, energy, and control of the last remnants of the planet.

3. SETTING

Páramo is the result of an unprecedented cataclysm that completely transformed the planet Vergel. What was once a prosperous world of great cities, entirely surrounded by a vast ocean, is today an arid, radioactive desert in ruins.

This definitive collapse occurred after the sudden opening of The Breach, an interdimensional portal through which an invasion of fantastic creatures and nightmare monsters burst. In a desperate attempt to stop this threat, world leaders unleashed a global nuclear war that ended up destroying the civilization and natural resources of the planet.

In this new reality where only the law of the strongest prevails, life makes its way among the remains of the fallen civilization. Control over what is left of this world is constantly disputed by five great clans:

- **Asphalt:** bands of humans focused on speed and survival in the wasteland.
- **Gunpowder:** human groups that resist the outside by taking shelter in fortified bunkers.
- **Shadow:** mystic humans who have learned to channel the magic emanating from The Breach.
- **Horde:** All kinds of atrocious and savage fantasy creatures. Among them we can find orcs, dragons, or hydras, to name just a few examples.
- **Abyss:** Interdimensional beings, cosmic aberrations incomprehensible to our limited understanding of reality.

The daily dispute for water, energy, and control of the planet's last resources keeps these clans in an eternal conflict for survival.

4. CLANS

4.1 Asphalt

They are a clan of human survivors inhabiting the arid and unforgiving plains of Páramo. Defined by their nomadic lifestyle and their absolute obsession with speed, they represent the most savage and visceral spirit of human survival after the nuclear cataclysm. For the Asphalt, movement is synonymous with life. They do not build bunkers or hide in fixed fortresses; instead, they group together in nomadic caravans that constantly roam the cracked highways and dunes of the wasteland. Their entire culture revolves around the veneration of vehicles and speed. They consider their machines as their most prized possession, their home, and their greatest weapon of war.

Their vehicles are unique pieces of improvised engineering, built from scrap metal recovered from the old world. They modify jeeps, trucks, and motorcycles by attaching defensive spikes, metal armor, and powerful exposed engines (like large V8 blocks) to ravage the battlefield.

Fuel is not just a tool for this clan; it is their vital resource and the engine of their existence. The Asphalt live in a violent and uninterrupted dispute against the other clans for the last drops of gas left in the ruins of Vergel. They know that stopping in the desert equals death, so their entire economy and combat objectives focus on looting and controlling fuel depots to keep their engines roaring.

They are violent, fast, and elusive. The Asphalt's combat style is defined by constant, relentless aggression. They are extremely fierce warriors and do not hesitate to physically run over their opponents. However, their great tactical advantage lies in being extremely unpredictable. Taking advantage of the power of their tricked-out engines, they launch devastating lightning assaults and retreat swiftly before slower factions, like Gunpowder or Abyss, can set their sights on them. Their elusive nature and top speed make them a lethal threat and almost impossible to corner in the open field.

(In the game, their cards are green and their main resource is gas)

4.2 Gunpowder

This clan is made up of human survivors who represent tactical order, military discipline, and defensive engineering in the unforgiving wasteland of Páramo. Unlike the exposed and chaotic nature of other groups, they have chosen to resist the collapse through preparation and the strength of organized technology.

Unlike nomadic clans, the Gunpowder have put down roots in the safety of engineering. Their entire existence is organized around massive fortified bunkers. These defensive bases are robust structures reinforced with heavy metal plates.

Their multilevel design is perfectly optimized for defense: they feature flat roofs protected by sandbag parapets, machine gun nests, and metal balconies equipped with loopholes from where

their sentries and soldiers, dressed in combat uniforms and armor, watch the horizon with assault rifles.

For this clan of engineers, metal is their fundamental resource and engine of life. While other factions rely on volatile fuels or dark mystical energies, the Gunpowder trust in the physical solidity of iron and steel to secure tomorrow. Metal is constantly extracted, processed, and molded to raise armored blast doors, repair their bunkers, manufacture traps, and forge the artillery that keeps the threats of the desert at bay.

The combat style of the Gunpowder is calculating and deeply territorial, focusing on fortification and absolute control of the area. Their key tactics include:

- **Heavy artillery:** They employ imposing artillery pieces and large-caliber cannons strategically placed to neutralize targets before they can get close.
- **Long-range weaponry:** They prefer safe-distance attrition combat, sweeping the battlefield with bursts of heavy machine guns and assault rifles.
- **Trap systems:** They secure the perimeters of their bunkers with complex trap systems to stop dead in their tracks both the motorized charges of the Asphalt and the physical assaults of the Horde.

(In the game, their cards are orange and their main resource is metal)

4.3 Shadow

The Shadow are a clan of hybrid humans, mystics, and cultists who have decided to forge ties with the supernatural forces that ravage the wasteland. Instead of fearing the horrors that burst from The Breach, this group of fanatics has learned to coexist with the anomaly and study its mysteries for their own benefit.

The life of the Shadow takes place halfway between the science of the old world and the witchcraft of the new. Unlike nomadic gangs or garrisoned soldiers, they tend to settle in remote and hard-to-reach places, such as steep valleys, deep caves, and mountain peaks.

Their shelters are a strange mix of the ancient and the arcane: they operate in spacious laboratories filled with old technology still in working order. There, using advanced knowledge, data terminals, and consoles, they study interdimensional energy and confine strange tentacled beings in containment tanks to unravel their secrets. Outside, they are easily recognized by their dark robes and hoods, carrying imposing staffs crowned with glowing gems that channel mystical energy.

All the sorcery and power of this clan is sustained by their fundamental resource: jimsonweed. This substance acts as the catalyst for their dark arts, allowing them to manipulate the energy flowing from The Breach and connect their minds to interdimensional planes. While other clans spill blood, forge metal, or burn gas to gain power, the Shadow rely on jimsonweed to unleash spells that alter the physical reality of Páramo.

Using dimensional rifts as portals, they are able to draw monsters and aberrations from the other side to fight under their command, bending the will of beings that would drive any common

human insane. Their tactics involve ruthless control of the battlefield, wearing down their opponents from the shadows and sacrificing whatever is necessary to dominate the wasteland through the power of The Breach.

(In the game, their cards are purple and their main resource is jimsonweed)

4.4 Horde

Horde is an invader clan composed of evil beings who crossed The Breach and adapted in an extraordinary way to the brutality and suffocating scarcity of Páramo.

This clan brings together orcs, goblins, giants, and all kinds of mythical beasts imaginable. Far from being simple aimless savages, Horde has a very active and organized society centered around physical strength and technical adaptability.

Orcs are large-scale, green-skinned colossi that act as the main shock force. In their forges and workshops, they can be seen working glowing metal and wielding great battle axes.

Goblins are the engine of ingenuity of the clan. They act as skilled mechanics capable of rebuilding and fine-tuning on rickety workbenches complex tricked-out engines from remains that others would consider simple scrap.

Blood is their fundamental resource. It represents not only the vital fluid of their powerful warriors but the visceral energy necessary to deploy their troops in the wasteland. While other clans consume gas or extract metal, Horde channels physical and organic strength to maintain its dominance and feed its war machine. They feed on it to achieve their extraordinary strength and endurance.

The combat style of Horde is direct, overwhelming, and devastating. They deploy massive hordes of creatures to saturate enemy defenses before they can react and rely on the physical superiority of their units to overrun any bunker or caravan.

They use the wasteland's scrap to provide mobility to their troops, launching orcs and goblins into battle riding motorcycles and modified vehicles.

(In the game, their cards are red and their main resource is blood)

4.5 Abyss

Abyss is not a clan in the traditional sense. While the humans of other clans fight for mere material survival or the Horde seeks to conquer territory, Abyss represents an intrusion of cosmic fantasy and horror that escapes mortal logic. They are formless aberrations and entities that crossed The Breach with the sole purpose of corrupting everything they touch.

Physically, the creatures of the Abyss manifest in biologically impossible forms. Their manifestations in the wasteland vary enormously in scale and location. From small floating entities to beings resembling small squids or jellyfish in bluish and purple hues, which levitate as they emerge directly from the interdimensional portals.

Other creatures are dark purple, reminiscent of octopuses of titanic dimensions, equipped with multiple eyes and dozens of limbs capable of sowing panic on the battlefield.

Aether is their fundamental resource. Unlike the Gunpowder's metal or the Asphalt's gas, Aether is not a physical matter that can be stored in barrels or bunkers. It is the very mystical energy of their home dimension, an invisible substance that warps the material reality of Páramo and allows them to deploy their supernatural powers.

They have no understandable political hierarchies or social structures. Their behavior is utterly erratic and baffling to the survivors. Although the mystics of the Shadow clan attempt to confine and study them in large containment tanks within their underground laboratories, the beings of the Abyss seem to tolerate this confinement, patiently observing their captors while their mere presence begins to shatter the sanity of those around them.

Their strategy does not seek direct physical clashes or defensive fortification, but rather the abstract manipulation of combat by altering the rules of the reality we know. They manipulate the environment to break the usual logic of our reality.

They mentally exhaust the opponent, sabotaging their options. They use the horror of their presence to deplete enemy forces, causing the sanity of soldiers to disintegrate when facing the unknown.

(In the game, their cards are blue and their main resource is aether)
